ABOUT MYSELF

A student from the **University of Information Technology – Vietnam National University HCMC**, he is currently enrolled in the **BS-MS integrated program** in Information Technology and will continue with his master's research after completing his bachelor's degree. His goal in life is to have a balanced, happy life with the people he loves. He always strives to improve efficiency in his work and enjoys working in a team environment.

SKILLS

- **Database Management & Data Analytics:** Strong expertise in database design, SQL, DAX, and data extraction
- **Data Engineering:** Building pipeline for ETL and integrating in warehouse, in the researching for ELT
- **IT Project Management:** Have certificate and knowledge about Project Management specifically Agile and Waterfall
- **Web, Java Application Development:** Have project about web and java application.
- **Machine Learning:** Applied ML for classification and prediction on real datasets (end-to-end from preprocessing to evaluation).
- **Artificial Intelligence:** Built smart chatbots, social media auto-posting, and automated PM/PMO documents (summarize → elaborate → finalize) in hackathon projects.
- **Research & Experimentation:** Able to review literature, design experiments, and evaluate new data/AI approaches for practical use cases.

EXPERIENCE

● PHU NHUAN JEWELRY JOINT STOCK COMPANY - 9 MONTHS

Data engineer - Requirements:

- Understanding of **databases and data modelling**, including relational databases and basic data warehousing concepts.
- Strong foundation in **technical analysis and statistical analysis** to support data-driven decision making.
- **Ability to analyze business strategies** and translate them into analytical and data requirements.
- Good understanding of **Cloud technologies**, preferably Microsoft Azure
- Familiarity with the **machine learning lifecycle** (data preparation, feature engineering, model training, evaluation, deployment) and willingness to support Data Scientists in these steps.
- **Research and Development skill** initiatives in Data Scientists and AI Engineers, such as exploring new data architectures for AI, optimizing pipelines for model training, or evaluating new technologies (LLMs, vector databases, streaming analytics, ...).

PROJECT

JAVA APPLICATION ABOUT HOSPITAL MANAGEMENT USING ORACLE DATABASE ROLE: MEMBER

- Participated in database design, defined system functionalities, and created project-related diagrams such as use case diagrams, activity diagrams.
- Contributed to both frontend and backend development for project.

WEB APPLICATION ABOUT HOSPITAL MANAGEMENT WITH LARAVEL USING MYSQL DATABASE ROLE: LEADER

- Designing and managing database.
- From java application improving features and UI more easily and attractively to users.
- Participating to backend and frontend development for project.

ANDROID APPLICATION ABOUT FITNESS & HEALTH TRACKING USING LARAVEL AND APPLY ARTIFICIAL INTELLIGENT TO CLASSIFY FOOD FOR TRACKING CALORIES ROLE: LEADER

- Developed Android app for nutrition & workout tracking using MVVM (Java, Retrofit, Room), including account management, meal/exercise history, and RESTful API integration.
- Designed and implemented backend with Laravel & MySQL ensuring data integrity and scalability.
- Integrated on-device AI (CameraX + TensorFlow Lite, fine-tuned InceptionV3 on Food-101) to recognize food from images and estimate calorie intake/output.

OUTLIER DETECTION APPLY FOR LOYALTY POINT OF CUSTOMER

- Analyzed the business logic of customer loyalty points and designed a 1,000-row synthetic dataset with four tiers and negative adjustments to mimic real customer behavior.
- Built a three-stage outlier detection pipeline combining rule-based negative checks, HBOS, IQR, and Isolation Forest with weighted voting to flag anomalous loyalty scores.

SIMILARITY FROM CUSTOMER SET BASED ON NAME, DATE OF BIRTH AND PLACE

- Performed data quality assessment and normalization of customer names, birthdates, provinces/districts, and full addresses to build a clean, standardized dataset for similarity scoring.
- Engineered field-level similarity signals (TF-IDF + cosine for names/addresses, stepwise date-of-birth similarity, province/district mapping) and combined them into a weighted total score to quantify customer relatedness.
- Implemented IQR-based threshold tuning to automatically flag high-similarity duplicate pairs and low-similarity outliers for review.

CERTIFICATE

TOEIC SPEAKING - WRITING

280 Points | 2023 - Now

TOEIC READING - LISTENING

855 points | 2025 - Now

SOFTWARE DEVELOPE WITH SCRUM

Axon Active Company | 2024

EDUCATION

PHU NHUAN HIGH SCHOOL

2019 - 2022

UNIVERSITY OF INFORMATION TECHNOLOGY - UIT

Vietnam National University
Ho Chi Minh City

2022 - Now

BUILDING AI AGENT TO AUTO MEDIA FROM POSTING TO SOCIAL MEDIA WITH CONTENT USING N8N

- Developed an AI agent that automatically generates and posts social media content (text, images, infographics) across multiple platforms from simple user inputs and templates.
- Designed a two-layer content review workflow where posts are first edited and refined, then formally approved before publishing.
- Engineered the pipeline using n8n to ensure quality, compliance, and brand safety while keeping the process scalable and maintainable.

AI TOOL FOR PM/PMO TO AUTOMATE AND OPTIMIZE THE PROCESS CREATE PROJECT CHARTER AND VERSION MANAGEMENT

- This project delivers an AI-powered assistant for PM/PMO teams that automates and optimizes the creation of project charters from simple, unstructured inputs.
- The tool generates standardized charter sections (scope, objectives, stakeholders, risks, timeline, etc.), suggests improvements, and supports iterative refinement instead of manual drafting.
- It also provides robust version management, enabling tracking of changes over time, side-by-side comparisons, and an auditable history of charter updates for better governance and alignment.

PRIZE

VIETNAM BUSINESS COOPERATION PLATFORM – ADVANCED INFORMATION SYSTEMS CONTEST 2023 – AISC'23 PRIZE: PEOPLE'S CHOICE AWARD

- IDEATION: Designed a digital platform concept to connect Vietnamese SMEs with investors, suppliers, and service partners, addressing the pain point of finding trustworthy business counterparts in a highly competitive market.
- Presented the solution at the Advanced Information Systems Contest 2023 (AISC 2023) and won the People's Choice Award for user voting.

RESEARCH

PREDICTION OF ANTI-CANCER PEPTIDES BASED ON HYBRID MODEL OF MACHINE LEARNING AND DEEP LEARNING

- Developed a hybrid framework that combines handcrafted sequence features with deep learning representations to predict anti-cancer peptides from amino-acid sequences.
- Trained and evaluated multiple classifiers on public ACP benchmark datasets, achieving higher accuracy, F1-score, and MCC than existing baseline models.
- Analyzed feature importance and model behavior to provide insights into sequence patterns associated with anti-cancer activity, supporting future peptide design and screening.
